

LabCollector

BIOBANKING SOFTWARE

**Manage
your samples
efficiently!**

LabCollector is an all-in-one **biobanking** software which manages the complete lifecycle of **samples**, addressing the needs of all modern biobanks and easing the sourcing of bio-specimens via an online catalog. The fully integrated software environment of LabCollector endorses your samples by increasing storage security, traceability, organization, automation and sample distribution to partners, opening new growth opportunities for your biobank.

Guaranteed Security:

- 100% Web-based application
- Secure collaborative platform
- Usage logs in a full audit trail
- Users group policies
- Record ownership
- ISO 17025, 21 CFR PART11, GDPR, HIPAA, CLIA compliance

Improved Organization:

- Fully customizable
- Powerful search engine
- Mass import, update and export of data
- Flexible process workflows
- Temperature monitoring of storage with alerts
- Software/hardware integration and automation via API
- Connection to Automated Sample Management/Storage Systems
- Reagents and supplies management and ordering

Assured Traceability:

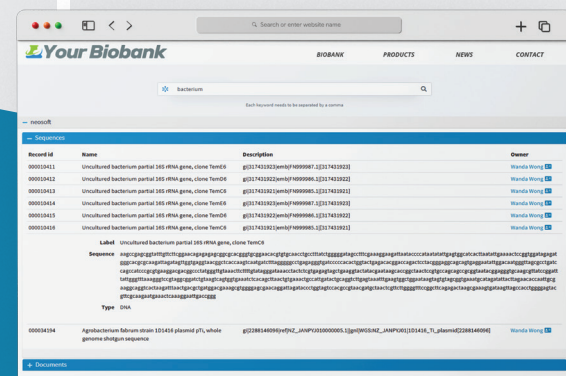

- Unique ID for each data entry
- Easily locate your samples in the lab
- Integrate sample analysis
- Track samples with barcodes
- Follow up sample processes
- Create links between records
- Add patient consent, shipment information and any documentation

Collaborative Catalog

Lab Cross Search is a web collaborative tool for biobanks which allows to search for biobanking samples across different LabCollector instances

- Search samples from anywhere by keywords with a single request in multiple biobanks
- Control the searchable resources of your biobank at module and field level
- Collaborate more by sharing your data with external partners to develop and grow your biobank
